OpenAI Select Partner

ANNOUNCEMENT · OPENAI PARTNER NETWORK

Centrum Transgenia, S.A.S. is an *OpenAI Select Partner.*

What the OpenAI Partner Network is. It is the global programme for partners to build, sell and deliver AI solutions with OpenAI. It brings together partners with sector expertise and delivery capability, and equips them with resources, enablement and support so that enterprises can adopt its models and products and turn them into measurable impact.

What being Select means. The programme has three tiers: Select, Advanced and Elite. As an OpenAI Select Partner, Centrum Transgenia can build on its work with OpenAI through program resources, enablement and support as it develops and deploys AI solutions for customers. For us, that means investing further in our technical capabilities and applying greater discipline to how we scope, document and measure customer projects.

What changes for our clients. The route changes, not the promise. We continue to do the same work (artificial intelligence implementation, ERP-Odoo and narrowly scoped agents) with a formal enablement path behind it, and with an external standard that obliges us to document what we deliver more rigorously and to measure it in live operation rather than in demonstrations.

WHAT THIS DOES NOT MEAN

- **We are not the highest tier of the programme.** Select is the first of three steps. Calling ourselves a "premium partner" or "OpenAI's official partner in Mexico" would be inaccurate, and we do not say it.
- **We do not appear in the OpenAI Partner Locator.** That public directory is reserved for the Advanced and Elite tiers. It is not ours yet.
- **A badge implements nothing.** It does not repair a broken process, clean up a product catalogue or bring order to a clinic's diary. That is still done by a team, with the client in the room and with their operation running throughout the transition.

WHAT THIS TRANSLATES INTO FOR YOUR ORGANISATION AND OUR CUSTOMERS

Medical practices, clinics, & healthcare

Concrete use case. An assistant that receives the appointment requests arriving today by WhatsApp and telephone, books them against the doctor's actual availability, sends reminders and drafts the consultation note from dictation, keeping the patient record and the invoicing inside the same system.

Intended outcome. Fewer missed appointments, consultations that start on time, and a doctor who no longer spends the last hour of the day typing notes and chasing payment. Patient data never leaves the practice's control.

Neither of these two cases is a promise of results. Before we propose anything we review the process exactly as it runs today and agree with you how it will be measured. If artificial intelligence does not apply, we say so.

Distribution, wholesale and trading companies

Concrete use case. An agent connected to ERP-Odoo that builds quotations from the catalogue and the current price lists, follows up open orders, flags when a supplier is running late and reconciles what was received against what was invoiced.

Intended outcome. Quoting in hours instead of days, no longer selling stock that is not there, and closing the month without the manual hunt for discrepancies between purchasing, inventory and invoicing.

LET US TALK FOR 15 MINUTES

Bring a process that costs you hours today. You will leave that call with an honest opinion on whether artificial intelligence applies, what it would take and what is not worth attempting.
